

Enlarging and printing with Acrobat Reader version 9

Free Acrobat reader can be downloaded from here: <http://www.adobe.com/reader.html>

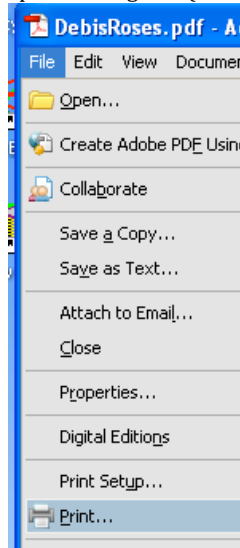

1. With the chart you wish to print from open (in this example it's Chatelaine – Debi's Roses a free design) click on Tools>Snapshot Tool (see below).

2. This will turn your cursor into a cross hair. Starting from the upper left I then drag a square around the area I wish to see enlarged on the printout. You start from where you want on your chart and drag a square around the area you wish to enlarge. Once you finish selecting the area you will receive a confirmation message that the area you chose has been copied (see below). Select OK.

3. Now click on File > Print to open the print dialog box (see below)

4. In the Print Dialog box, make sure (1) Document and Markups is selected, (2) selected graphic is chosen, and page scaling (3) is set to Fit to Printable Area. Then check the Zoomed image and size (4) and if you are happy with the size select ok to print.
